

Clear Window Clings

Applying your window cling can be done in a few simple steps. All you need is the window cling, a clean surface, a soap and water mixture in a spray bottle, and a squeegee (available for purchase with a window cling).

1 Thoroughly clean the surface of the glass or non-porous surface you're applying the window cling to.

2 Once the surface is clean, gently peel the clear backing away from the cling.

3 Use a light soap and water mixture to spray the window and the non-printed side of your cling (the front for inside glass window clings or the rear for outside glass, or standard surface, window clings).

4 Apply the cling to the surface by starting at the top, applying pressure as you work your way to the bottom.

5 Use a rubber-tipped squeegee* to remove excess water and bubbles

**Available for purchase with a window cling.*

6 Once dry, your window cling will adhere to the window, while still being removable and repositionable!
